

TheDropwatcher

A REAL WORLD LORAWAN APPLICATION ON RIOT

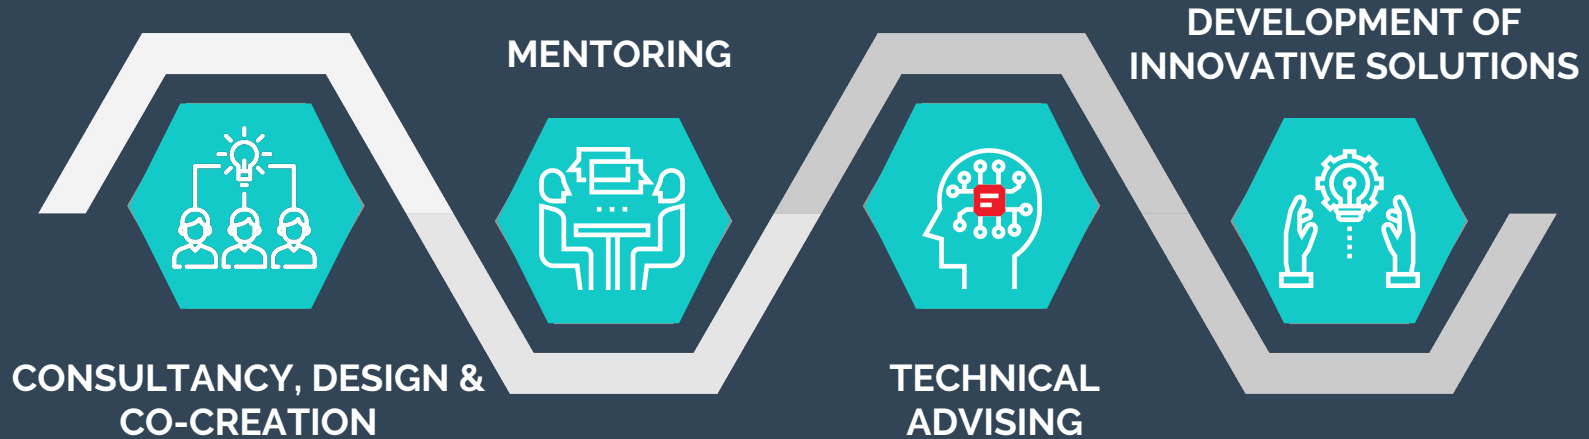

WHO DO WE WORK WITH ?

Strategic partner for the development and transfer of innovative solutions, connecting the academic world and the research with the real needs of companies.

WHAT DO WE DO?

INTEGRATION OF TECHNOLOGIES

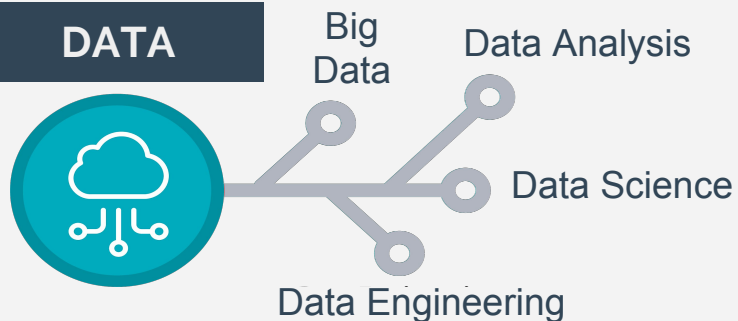

ARTIFICIAL INTELLIGENCE

INTERNET OF THINGS

DATA

COMPUTER SIMULATION

HEAP LEACHING PROCESS

HEAP LEACHING

Source: superfund.arizona.edu

THE PROBLEM

Constant Flow in Sprinklers Is Important

- Low flow affects copper extraction efficiency
- High flow can collapse the heap
- Millions of dollars in losses

Hard to measure

- Current approach based in human reading
- Not accurate
- Low sampling rate

THE PROBLEM

Contest launched by **Telefónica I+D** to monitor acid flow going into a copper heap.

Requirements

- Low cost IoT device.
- Flow monitoring every 10 minutes
- LoRaWAN connectivity
- Run on batteries for 6 months

OUR PROPOSED SOLUTION

$$F = \frac{nV}{T}$$

Where:

F = estimated flow

n = number of drops

V = average drop volume

T = sampling period

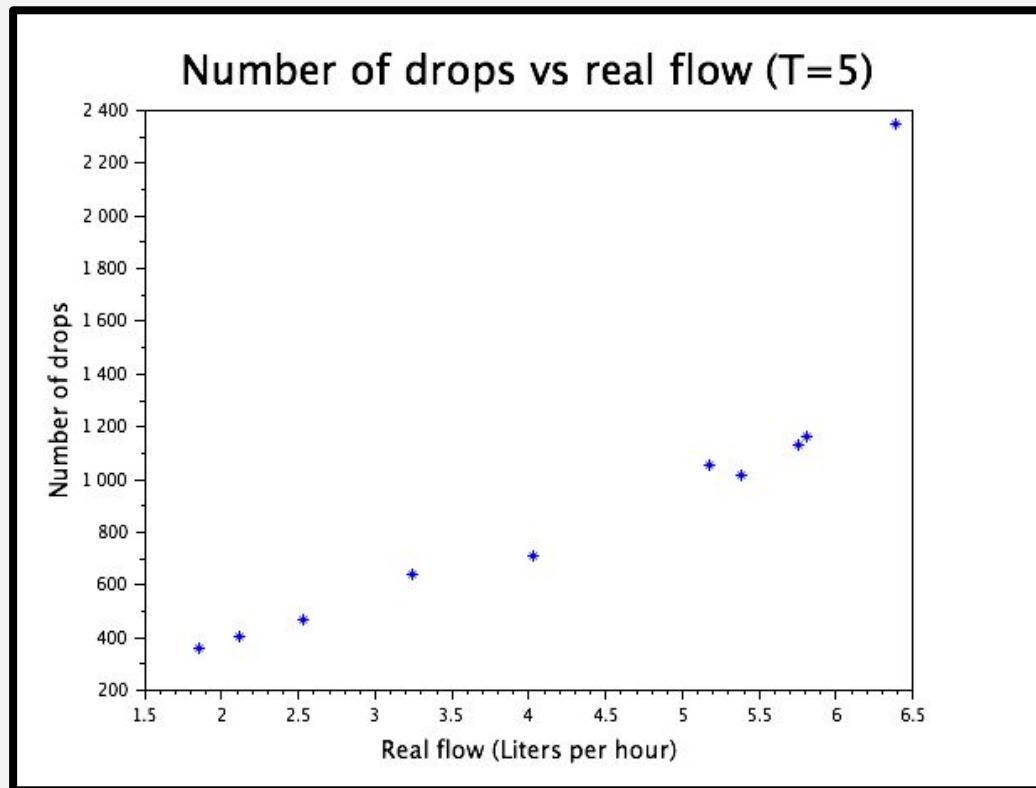

ITERATIVE PROCESS

DROP DETECTION

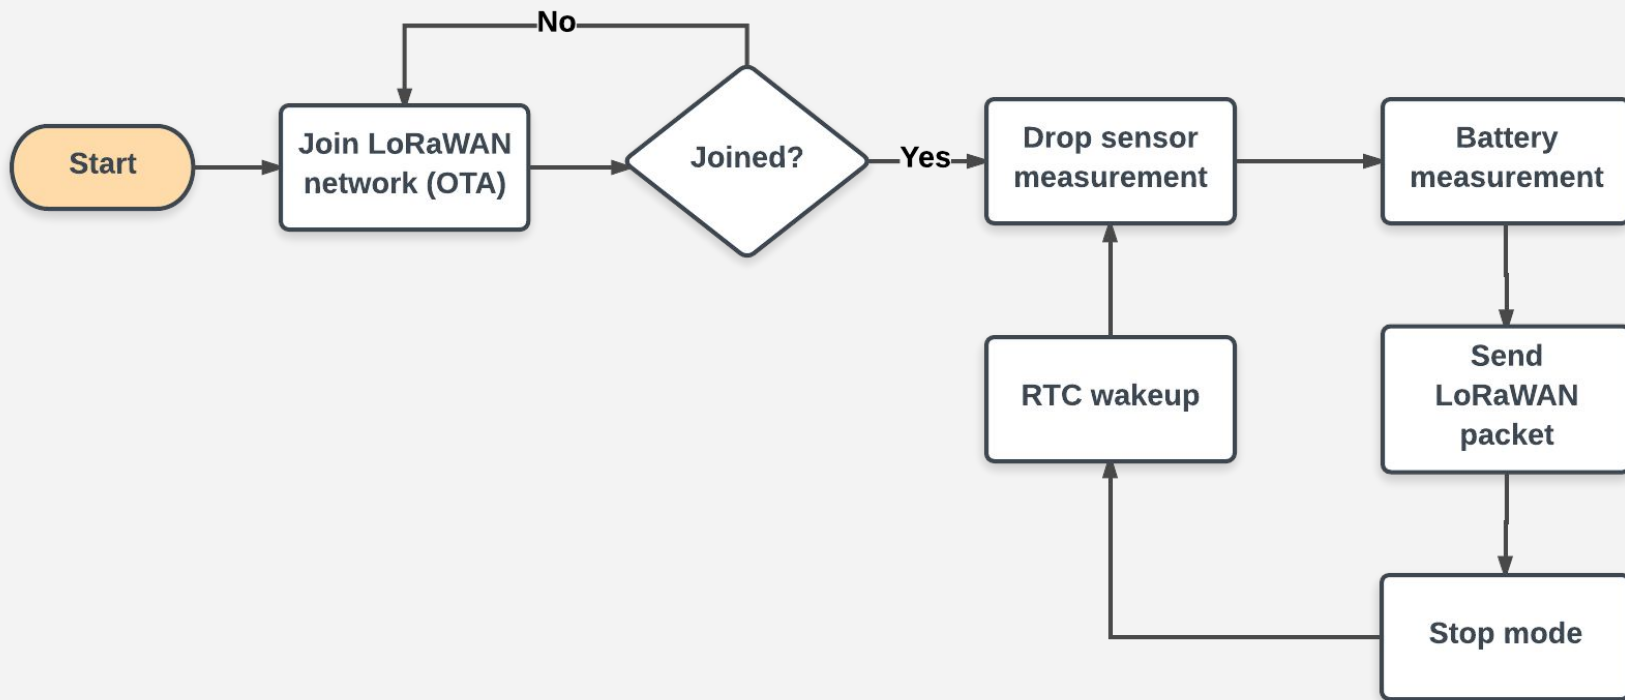

DROP DETECTION

THE DROPWATCHER

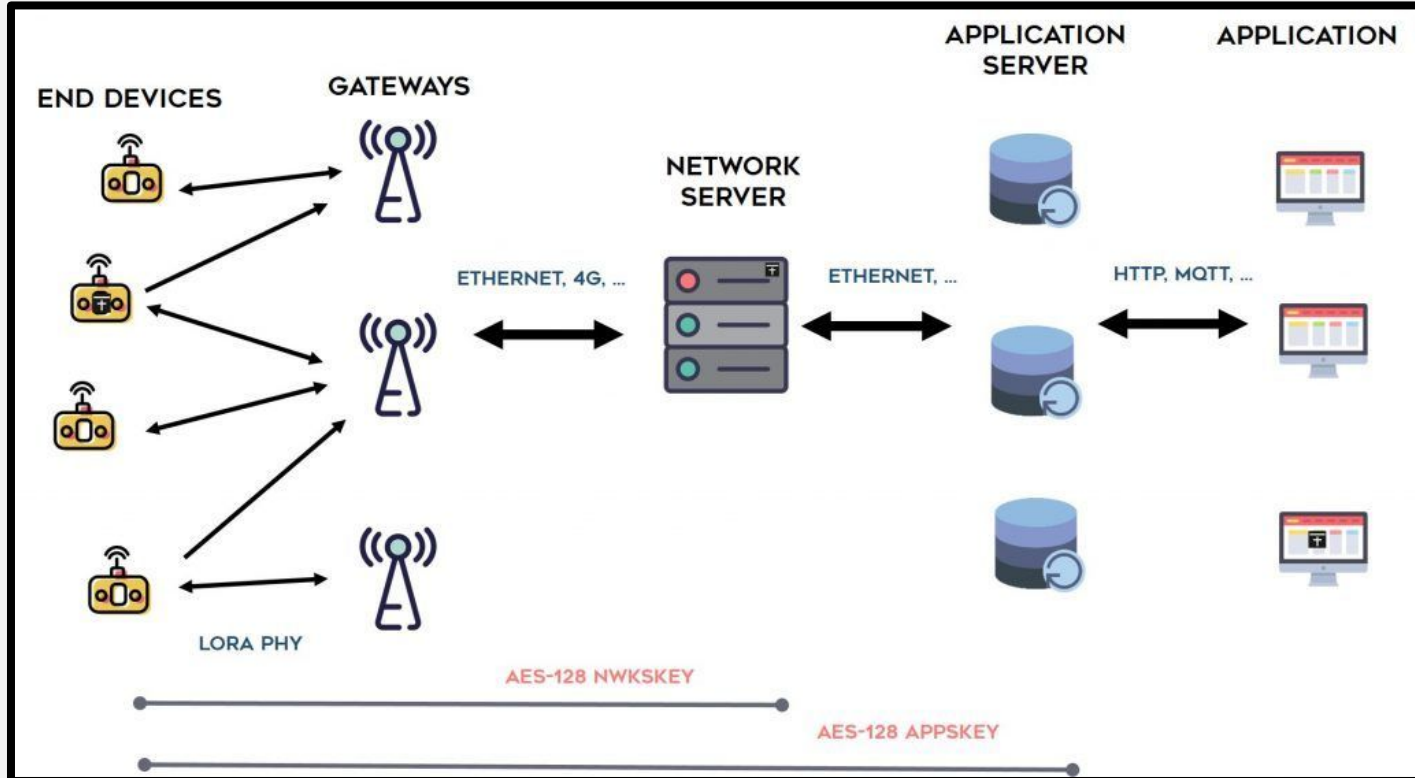

HOW IT WORKS

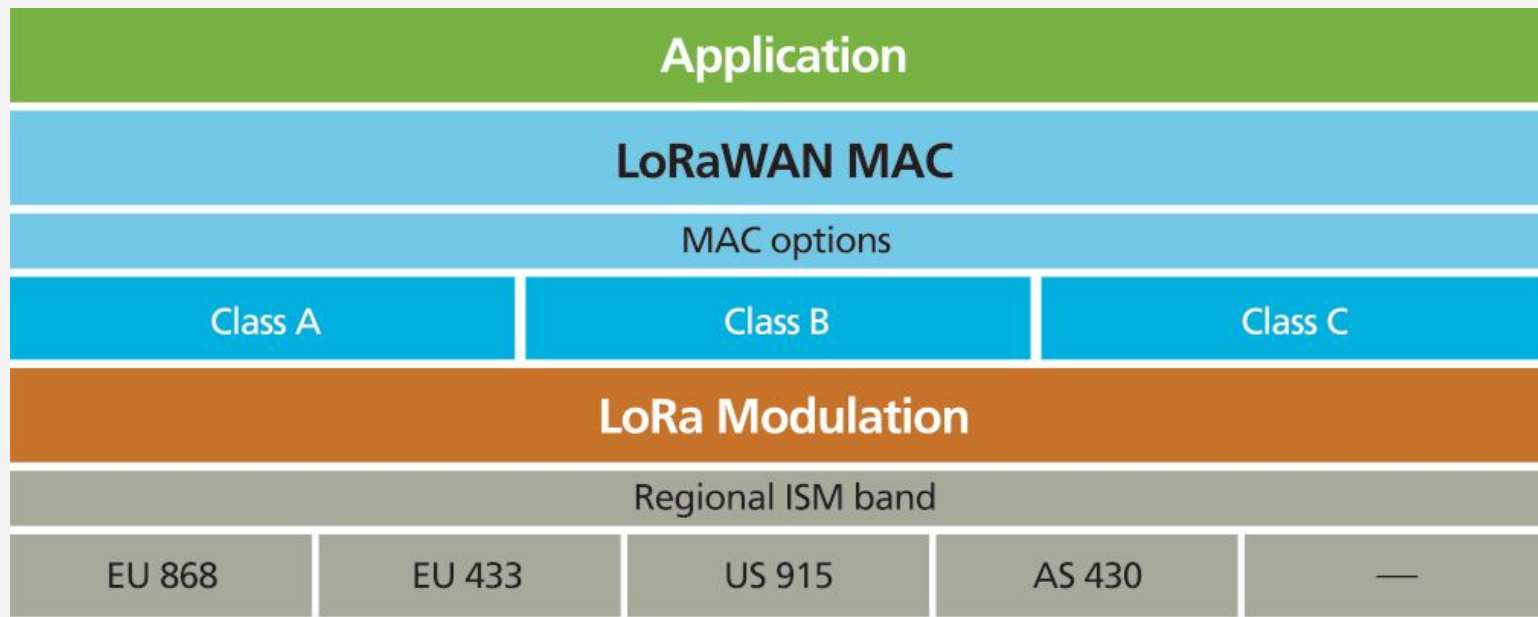

Brief LoRaWAN overview

LoRaWAN architecture

LoRaWAN communication **stack**

OUR LORAWAN **SETTINGS**

- **Class A:** minimum average power consumption.
 - Two short receive windows after uplink
- US-915 band

LoRaWAN on RIOT

THE INCEPTION

**Modtronix
NZ32-SC151**

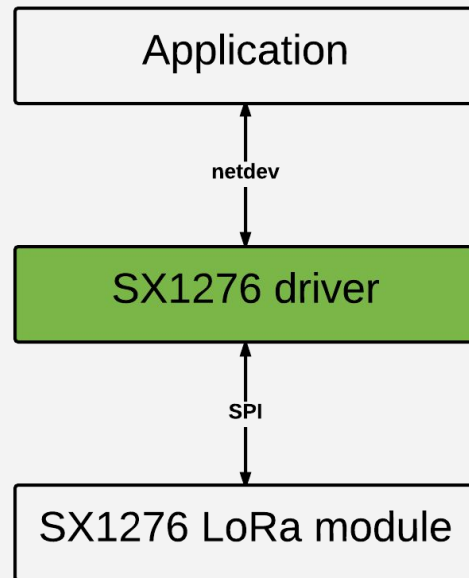

**Modtronix
inAir9A
(SX1276)**

**Everynet
Gateway v2.1**

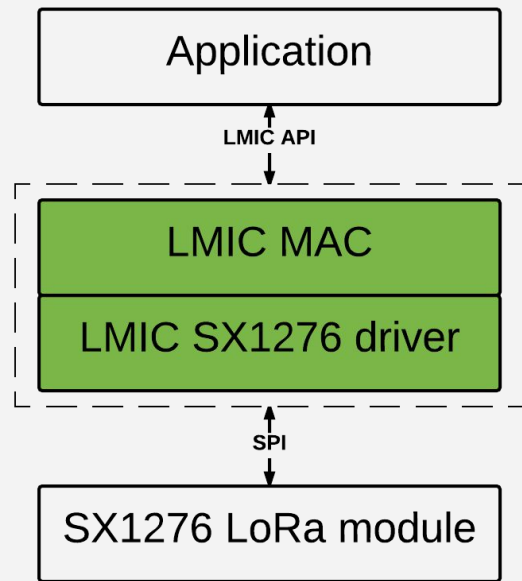

LORA MODULE (SX1276)

- Pull Request of SX1276 driver (#6002)
- Netdev adoption
- Currently merged with support for SX1272 too.

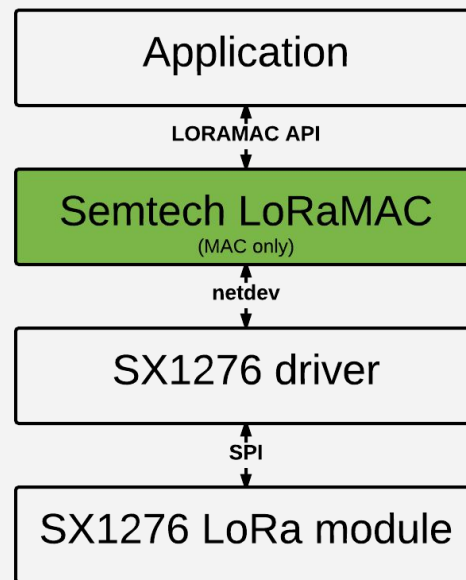

LMIC

- IBM LoRaWAN implementation
 - Implements Class A and Class B
 - Arduino LMIC
- Proof of Concept
- On-going PR (#7640)

SEMTECH LORAMAC

- Reference implementation
 - Class A and C
 - ADR
- Ported just the MAC layer
- Flaws during OTA
 - Some part of the logic runs in ISR context
 - ISR overflow in some boards.

MODIFIED SEMTECH LORAMAC

LOW POWER

- Stop mode not implemented for STM32L1 CPU.
 - Used Unwired Devices Low Power Management implementation
- Unable to reach CPU power consumption in stop mode
 - 40 μA while in stop mode
 - We got 0.5 μA in a Nucleo L1 in a further iteration, same software and CPU.

SOME TESTS

- Settings
 - Unconfirmed messages
 - 8 bytes payload
 - Sending every 30 seconds
 - 14 dB
- > 99% Packet Reception Rate
- Board ran out of batteries (2300 mAh) after ~ 40 days
 - As expected!

SOME TESTS

Node	# Packets	PRR	SNR	RSSI
1	5502	99.3%	11 dB	-26.2 dB
2	5505	99.7%	9.7 dB	-22.2 dB
3	5581	98.8%	10.1 dB	-34.3 dB
4	5476	98.8%	10.4 dB	-31.9 dB
5	5560	99.7%	10.6 dB	-24.4 dB
Avg	5524	99.26%	10.36 dB	-27.8 dB

Deployment & Results

DEPLOYMENT: July 7th, 2017

AFTER A **WEEK**

ENDURANCE

- Nodes were shut down on september 22nd.

SOME DAYS AGO

LORAWAN PERFORMANCE

LORAWAN PERFORMANCE

Statistics by device

Packets by datarate

Device EUI	373638386A336B13
Uplink packets	1685
Downlink packets	0
Uplink packets (with payload)	1685
Downlink packets (with payload)	0
PRR	79.9%
RSSI (average)	-115.6 dB
RSSI (last)	-112 dB
SNR (average)	2.0 cB
SNR (last)	1.8 cB

DROP SENSOR

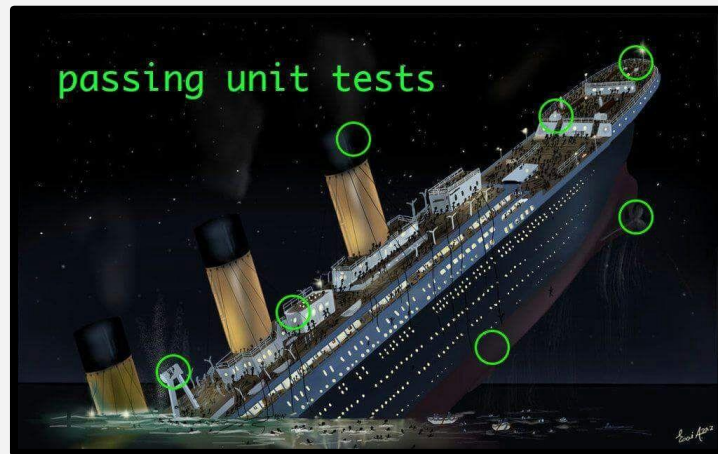

LESSONS LEARNED

- LoRaWAN performance
 - Low Power
 - Range
- Design process is crucial
 - Fail fast
 - Unit test vs Integration test
- Importance of community

LESSONS LEARNED

- LoRaWAN performance
 - Low Power
 - Range
- Design process is crucial
 - Fail fast
 - Unit test vs Integration test
- Importance of community

EPILOGUE

- Future of the DropWatcher?
- Let's integrate LoRaWAN into RIOT!
 - LMIC
 - Semtech LoRaMAC
 - GNRC LoRaWAN stack?
